

Standard quilts have corners with 90 degree angles, but sometimes you come across a project with an “odd” angle. Today, I am going to show you how to bind a quilt which has 135 degree corners (8 sides). Next week, I’ll show you how to make the cute little project that I’m binding today!! (Find the [Valentine’s Day Mug Rug project here.](#))

You will need binding strips just like if you were binding a standard shaped quilt (usually 2 1/4 – 2 1/2” wide.) Fold them in half lengthwise, right sides out, and press.

Place the binding on the edge of the quilt, with raw edges aligned. Use a ruler and draw a line which is 1/4” from each edge. Then draw a line from the intersection to the corner of the quilt.

Sew along the first edge, then along the line that goes to the corner:

Fold up the strip, so that the raw edge is even with the next edge of the quilt:

Fold the strip down, so it's even with the quilt edge. The fold should make a 90 degree angle. Pin the strip in place. Draw your lines for the next corner:

Start sewing about 1/4" from the fold:

Sew along the line, out toward the corner:

Repeat at each corner:
